

National Severe Weather Warning Service

Chief Forecasters Assessment

The focus for this rainfall event is likely to be the highly populated Central Lowlands. Event rainfall totals are expected to be in the range 50-100 mm for many, with perhaps a little more than this in some western parts.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **03:00 on Wed, 10th Aug 2011** until **18:00 on Thu, 11th Aug 2011**

Persistent rain setting in in the small hours of Wednesday will become heavy at times, and is likely to continue through most of Wednesday, then ease off only very slowly during the course of Thursday. The public should be aware of standing water issues throughout the period. There is also the risk of localised flooding; this risk will steadily increase through the period as the rainfall totals mount up.
